

URIPOT® URİKONE®

from Rocket Medical

The URİKONE® & URIPOT® offer cost effective, ready to use urine collection in two styles to meet the widest range of patient needs.

URIPOT® has an anatomically designed filling pot with soft, smooth edges and is warm to the touch, making sampling easier and more comfortable for the female patient. A special non return valve makes gradual filling simple and helps prevent overflow and spillage.

URİKONE® offers a simple, traditional cone design ideal for male urine collection

Both designs feature:

UNIVERSAL CONTAINER, used as standard by most laboratory services, makes urine collection easy and cost effective.

PRE-ASSEMBLED: simple and ready to use, suitable for either male or female.

INCLUDES AQUEOUS PRE WIPE for easy, rapid cleansing of the genital area prior to sampling.

WALL CHART with instructions for use are supplied with each outer of 50 units. Call the Customer Services Hotline.
